INTRODUCTION

Facing Up was first published in 1967 as a joint project of the Division of Educational Research and Statistics (now the Division of Management Information Services) and the Office of Public Information and Publications to provide selected statistical data about Virginia's public schools. *Facing Up* has been updated annually since that time.

To clarify some of the figures reported in *Facing Up*, the following definitions are provided:

Membership is the number of pupils belonging to a school unit at any given time. The total number of pupils present and absent on any given day is the membership for that day.

Average Daily Membership (ADM) is the average number of pupils belonging each day in a room, school, or school system for the period of report. ADM is determined by dividing the sum of the days present and absent of all pupils when school is in session during a given period by the number of days school is in session during this period.

March 31 Average Daily Membership is the average daily membership for the first seven months (or equivalent period) of the school year.

End-of-Year Average Daily Membership is the average daily membership for the entire school year.

September 30 Membership is the sum of pupils present and absent on September 30 or the school day closest to September 30.

End-of-Year Membership is the sum of pupils present and absent on the last day of the school year.

[1]Listed in this table are the division-by-division and statewide results from the Virginia State Assessment Program. The results are reported in percentile equivalents of average scores; i.e., the average scores (for a division or the state) are compared with the scores of a national norm group (national sample of students). A percentile equivalent of 54 indicates that the average score is higher than the scores of 54 percent of students in the national norm group and lower than 46 percent. The 50th percentile represents an average score for students nationwide. Test scores are not precise measurements; therefore, differences of several percentile points may not be significant.

[2]The Science Research Associates (SRA) Achievement Series is a test battery designed to measure a student's status in the major skill and content areas.

[3]The Educational Ability Series (EAS) is designed to provide an estimate of a student's ability to do grade level work.

[4]Alleghany Highlands includes the merger of Alleghany County and Clifton Forge City.

[5]Bedford County data include Bedford City.

[6]Fairfax County data include Fairfax City.

[7]Grayson County data include town of Fries.

[8]Greensville County data include Emporia City.

[9]Williamsburg City data include James City County.

[10]Roanoke County data include Salem City.

[1]As required by the Appropriations Act of the 1982 General Assembly.
[2]The Local Composite Index is multiplied by .5 since the Basic Aid Distribution Formula provides that the cost of the *Standards of Quality* program shall be apportioned between the State and school divisions of average ability to pay on an equal basis.
[3]The Composite Index used for the distribution of Basic School Aid funds to Alleghany Highlands, the merged school division of Alleghany County and the City of Clifton Forge, is .3026. This is as stated as a provision in the Appropriations Act for the 1982-84 Biennium.
[4]The Composite Index used for the distribution of Basic School Aid funds to Middlesex County is .6945. This results from a revision in the true value of property by the State Department of Taxation from $321,830,000 to $299,419,000 for Middlesex County in September 1982, however, administrative procedure in such cases is that the Composite Indexes of all other school divisions will not be changed during the biennium.

CALCULATION OF THE COMPOSITE INDEX OF LOCAL ABILITY TO PAY

$$.5^{*}\left[\frac{\text{Local True Value of Real Property / Local Average Daily Membership}}{\text{Total Local True Values of Real Property Statewide / Total Average Daily Membership Statewide}}\right] + .1^{*}\left[\frac{\text{Local Personal Income / Local Average Daily Membership}}{\text{Total Personal Income Statewide / Total Average Daily Membership Statewide}}\right] + .1^{*}\left[\frac{\text{Local Taxable Retail Sales / Local Average Daily Membership}}{\text{Total Taxable Retail Sales Statewide / Total Average Daily Membership Statewide}}\right] = \text{Average Daily Membership Composite Index}$$

$$.5^{*}\left[\frac{\text{Local True Value of Real Property / Local Population}}{\text{Total Local True Values of Real Property Statewide / State Population}}\right] + .1^{*}\left[\frac{\text{Local Personal Income / Local Population}}{\text{Total Personal Income Statewide / State Population}}\right] + .1^{*}\left[\frac{\text{Local Taxable Retail Sales / Local Population}}{\text{Total Taxable Retail Sales Statewide / State Population}}\right] = \text{Per Capita Composite Index}$$

$$.6667 \times \text{Average Daily Membership Composite Index} + .3333 \times \text{Per Capita Composite Index} = \text{Local Composite Index}$$

*The constants .5, .1, and .1 represent the average share of local revenues gathered from real property taxes, charges and miscellaneous revenue, and the 1 per cent local option sales tax, respectively. Personal income data are used in the above formula as a proxy for the taxes derived from local charges and miscellaneous revenue because detailed information on the latter is not available. This is specified in the Appropriations Act.
